

CS EyeView

Server based inspection analysis & evaluation from any location

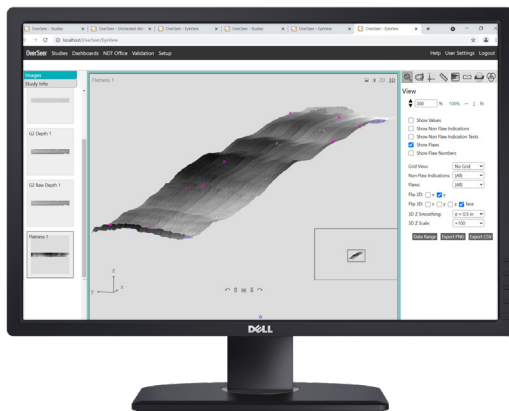

EyeView bolts on to the OverSeer framework and provides an easy to use interface that understands multiple inspection techniques and data formats.

OverSeer-driven performance

Overview of Key Features

EyeView is a lightweight viewing and analysis tool for NDT images.

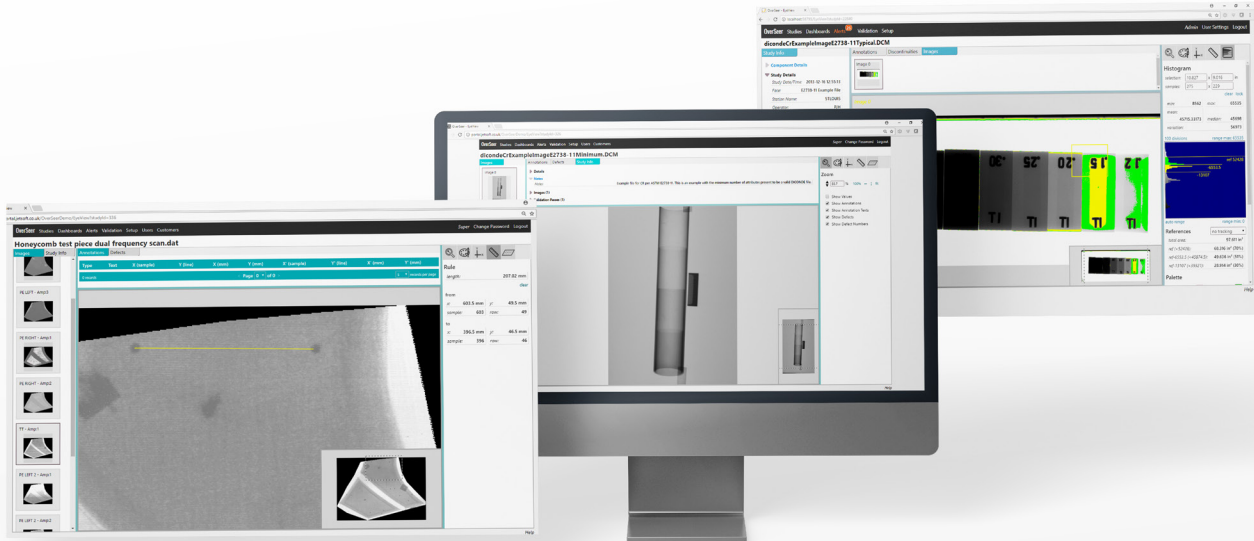

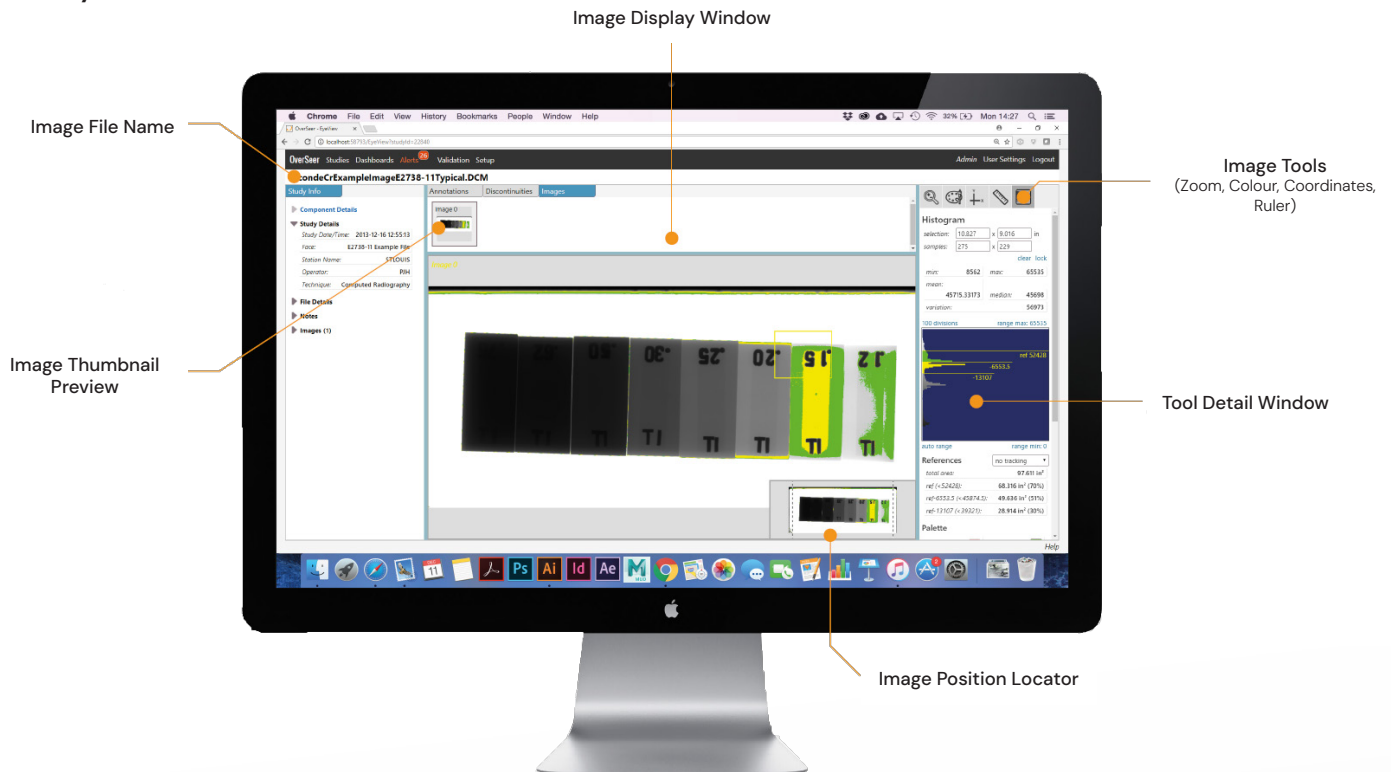

Built using modern web technologies, EyeView is fast, efficient and enables instant communication to all stakeholders. Our zero-install solution eradicates the need to maintain legacy viewing applications.

- CS Single interface allows users to compare information from multiple formats and inspection techniques.
- CS Seamlessly integrates to Jetsoft's OverSeer data management system.
- CS Zero client install enables users to perform remote analysis from any location and computer.
- CS Easy collaboration with colleagues in remote locations for faster analysis and decision making.
- CS In house modular design enables rapid bespoke development to provide application specific tools, for improved use and performance.
- CS Easily and unobtrusively monitor any outsourced inspections.
- CS Expose data and tools to allow customers, suppliers or any third parties to take measurements and make evaluations, improving your value proposition, helping to win more clients
- CS Simple, intuitive and a joy to use, while maintaining powerful tools and features.
- CS Refuse demand on IT departments to manage multiple software installations across many platforms, equipment and location.

EyeView Interface

Screenshot of EyeView interface, displaying image analysis results in a very clear and concise manner.
