

Inspection Results Monitor

Meet the latest NADCAP requirements
of AC7114 Rev R section 10 Inspection
Results Monitor

Why IRM?

Inspection Results Monitor is a software application designed specifically to help you meet the new requirements listed in AC7114 Rev R section 10.

The new requirements require your company to provide clear evidence of the following:

-  **10.1** Is there a procedure in place that addresses the monitoring of NDT inspection results?
-  **10.2** Does the procedure address monitoring the resultant data trends over a specified time?
-  **10.3** Is there evidence the monitored results are reviewed at the specified time interval as defined by the Auditee or Customer?
-  **10.4** Is there evidence of actions taken for results that demonstrate atypical trends?

Guidance: When atypical trends are found, action shall include at a minimum, a documented investigation into the cause for the variation and an RCCA plan where NDT process error is identified.

Our Inspection Results Monitor application allows you to meet the requirements with minimal effort and cost, simply download the application, add your data and automatically create the required reports.

New revision of checklist to be used on audits **starting on or after 4th December 2022**

Key Features & Benefits

- Meet the latest NADCAP requirements of AC7114 Rev R Section 10
- Designed specifically for this task, the software is quick and easy to understand
- Designed for simple and fast data entry, minimising the overhead on key personnel
- Configurable deviation standards
- Provides a report covering a documented investigation into the cause for the variation and an RCCA plan where NDT process error is identified.
- Collaborate with colleagues, multiple users can access the same data source simultaneously
- Works across all NDT inspection methods
- On-premises so no data leaves the security of your network
- Built in filters enable quick data separation and analysis
- Single one-off payment no reoccurring fees
