

OverSeer

A central database for all your inspection data

Unlock the power and value in inspection data to drive actionable change to improve efficiency, increase productivity, reduce defects, raise yields and improve quality.

Built to industry standards

JetSoft supports all major open NDT standards and partners with equipment manufacturers to read proprietary and non-NDT data, consolidating everything into a purpose-built, shareable database schema.

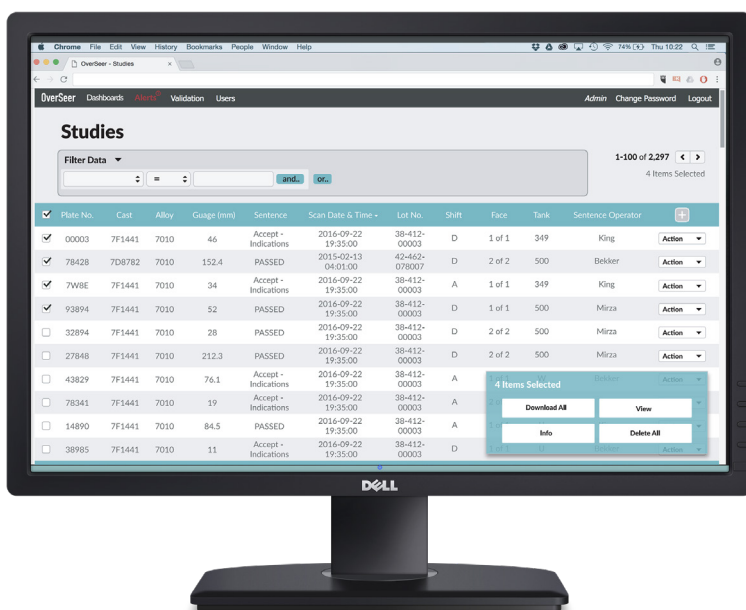

Enterprise-grade server-based solution

Deployed on-premise for maximum security, with user access integrated into existing IT frameworks via Active Directory, including SSO and PingFederate support.

Get insight from your NDT data

Get insight from your NDT data. Intuitive built-in dashboards provide unique visibility including: pass rates, defect rate monitoring and machine utilisation and OEE statistics. By analysing inspection data OverSeer enables you to identify root causes of defects.

OverSeer is JetSoft's flagship, enterprise, server based, inspection data management solution for automatically reading and cataloguing inspection information.

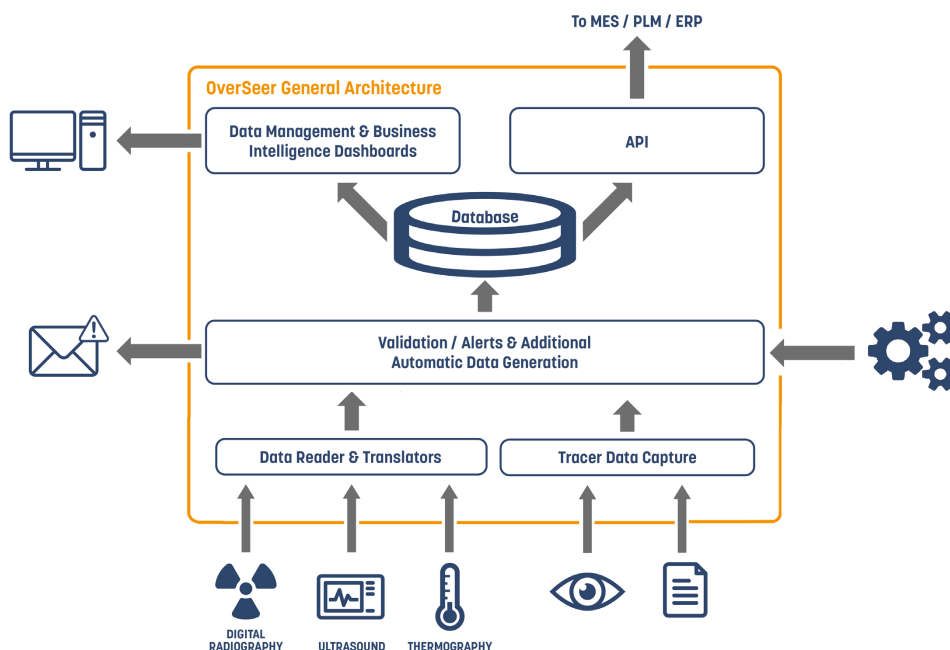

Agnostic of format and technique OverSeer compiles data into one database and comes with an effortless user interface to:

-  Improve efficiency
-  Increase productivity
-  Reduce defects
-  Raise yields
-  Improve quality

Overview of Key Features

Improve how you capture, manage and utilise your inspection data. Unlock the value of your inspection data to drive actionable improvements in efficiency, productivity, quality, yield, and defect reduction.

- Enterprise grade, secure on-premise installation means data never leaves the safety of your network
- SQL-based architecture enables fast data search and retrieval
- Alerts and notifications improve communication and provide real time data validation
- Aggregate data across all inspection techniques and formats
- Business intelligence tools transform NDT data into actionable operational insights
- Automated data archiving simplifies long-term data management
- Built in extensible AI – JetSoft specialists work with you to build AI models that inspect data based on your requirements
- Developed entirely in-house, with flexible configuration and customisation to meet your needs

JetSoft
Data Solutions for NDT

OverSeer understands an ever-growing list of formats.
